

## GeoTrust: True BusinessID Multi-Domain

### Secure up to 25 domains on a single server

With a GeoTrust® True BusinessID Multi-Domain certificate, you can add, edit, or delete up to 25 domain names over the lifetime of the certificate. Designed for Microsoft Exchange or Microsoft Communications Servers, this Unified Communications Certificate is also suitable for shared hosting environments, QA testing environments, and small businesses with multiple business applications to secure on a single server.

### Full authentication with flexible domain options

GeoTrust fully authenticates organization and primary domain to quickly issue a certificate. You can add, edit or delete any additional domain names to the subject alt name (SAN) field during the enrollment process or at anytime during the lifecycle of the certificate. True BusinessID Multi-Domain certificates support several domain formats as long as the organization specified in the certificate has the right to use the domain.

Accepted Domain Formats	Example
Fully qualified domain name (initial domain secured)	www.fullyqualname.com
Different second level domain	www.secondname.com
Different top level domain	www.fullyqualname.net
Server names	msexchange1
Intranet and .local names	msxautodiscovery
Private IP addresses as per RFC 1597	192.168.0.0 - 192.168.255.255

### Secure communications with up to 256-bit encryption

GeoTrust helps to protect sensitive information during transmission when customers, business partners, and employees connect with each other online. True BusinessID Multi-Domain certificates enable 40-bit to 256-bit encryption, depending on the client browser capability and the cipher suite installed on the web server.

## Grow your business with the True Site Seal

Every True BusinessID certificate includes a dynamic [GeoTrust True Site Seal](#) with your company name and a real-time date/time stamp. When users online, see the seal and verify, they have more confidence to complete their transactions and trust the services.

## Licensing Policy

Each Certificate comes with minimum license for **5 domain names** and every additional domain name license is charged extra.

**Support** is for maximum of **25 domain names** in a **single server**, however first or primary domain name must remain the same and all additional domain names can be edited, deleted or added as needed during the certificate lifetime. Each time a change is made in the SAN field, the certificate is regenerated and has to be installed in the server for the new name to be effective.

## Features and Benefits

- Secure up to 25 different domains on a single server
- Full organization validation
- Up to 256-bit SSL encryption supports secure transmission of sensitive data
- Display the GeoTrust True Site Seal with company name, date/time stamp
- 1-5 year validity options
- Free lifetime, self-service reissues
- \$100,000 warranty
- Ubiquitous compatibility with 99+% of all browsers and most mobile and smart phone applications
- Quick and easy to install
- Free support by chat, web, phone and email
